SHARATH M HOLLA

Bengaluru, Karnataka • +91 8123532267 • sharathholla98@gmail.com

Senior DevOps Engineer

Results-driven Senior DevOps Engineer with 6 years of hands-on experience designing, automating, and managing enterprise-grade cloud-native infrastructure on AWS. Proven expertise in Platform Engineering, Infrastructure as Code (Terraform/Terragrunt), GitOps automation (ArgoCD), Kubernetes (EKS), DevSecOps, and observability solutions and ML model deployment/monitoring pipelines (MLOps). Platform-agnostic DevOps engineer with primary AWS expertise and foundational experience across Azure. Demonstrated ability to reduce infrastructure costs by 25-70%, improve deployment efficiency by 80%, and enhance system reliability through automation and cloud engineering best practices.

WORK EXPERIENCE

Xylem
05/2024 - Present

Senior DevOps Engineer
Bengaluru, India

- Architected and implemented multi-AZ, high-availability Kubernetes clusters on EKS with 99.99% SLA compliance, enabling zero-downtime deployments and automated failover mechanisms across availability zones.
- Designed disaster recovery strategies with 15-minute RTO and 5-minute RPO, enabling cross-region cluster replication and automated backup/restore.
- Extended the EKS platform to support ML workloads by building a DVC-versioned data pipelines (S3 based preprocessing) integrated with MLflow for experiment tracking and automated model registry promotion.
- Deployed ML inference services on EKS using KServe, and implemented Evidently AI for automated data drift and model quality monitoring, integrated with Datadog to track endpoint latency, error rates, and drift alerts.
- Reduced compute costs by 25-45% through Karpenter-based autoscaling, HPA/KEDA workload optimization, and Spot Instance strategy for non-production environments.
- Implemented IAM Roles for Service Accounts (IRSA) and External Secrets Operator, and least-privilege RBAC policies across 50+ AWS accounts, reducing manual secret handling by 80% and security incidents by 40%.
- Developed reusable Terraform and Terragrunt modules that reduced infrastructure provisioning effort by nearly 70% across multiple AWS environments.
- Implemented GitOps deployment workflows using ArgoCD with App-of-Apps architecture and Helm charts, managing 15+ microservices across 4 environments with zero configuration drift.
- Enhanced deployment efficiency by 80% through the integration of OIDC authentication and Bitbucket Pipelines, streamlining the CI/CD process within 4 months.
- Created Datadog dashboards, monitors, and Splunk integrations that improved observability and reduced incident response time (MTTR) by 30%.
- Partnered with 5 engineering teams to establish governance standards, reducing release rollbacks by 40% and achieving 99.5% platform uptime.
- Leveraged AI-powered development tools (GitHub Copilot, Claude) to accelerate Terraform module development, documentation creation, and infrastructure automation scripting, reducing IaC development time by 20-25%.

Tata Consultancy Services (TCS)
11/2020 - 05/2024

DevOps Engineer
Bengaluru, India

- Built and maintained 12+ CI/CD pipelines for React and containerized applications using Jenkins, reducing release failures by 65% and cutting deployment time from 45 to 15 minutes.
- Automated AWS infrastructure provisioning using Terraform for IAM, EC2, ALB, Auto Scaling Groups, Lambda, VPC, S3, CloudFront, and SNS services.
- Managed AWS RDS Aurora multi-AZ deployments with cross-region read replicas, achieving 99.9% uptime for production databases.
- Architected platform-agnostic Infrastructure as Code (IaC) strategy using Terraform for multi-cloud environments (AWS, Azure), creating standardized infrastructure patterns and reusable

modules that enabled seamless workload portability and reduced cloud vendor dependency.

- Reduced repetitive operational tasks by approximately 60% using automated Ansible deployment workflows and configuration management practices.
- Created standardized machine images using Packer, improving server provisioning consistency across environments.
- Implemented serverless solutions using API Gateway, Lambda, DynamoDB, S3, and CloudFront for highly available hosted applications.
- Implemented HashiCorp Vault and Trivy-based container security scanning to strengthen secrets management and DevSecOps practices.
- Configured CloudWatch monitoring, autoscaling policies, and alerting systems for production workloads, improving application reliability.
- Managed Git branching strategies, release workflows, and collaboration processes using GitHub and Bitbucket.
- Collaborated with development, QA, and operations teams in Agile/Scrum environments to streamline deployments and improve release efficiency.

MENTORSHIP & TECHNICAL LEADERSHIP

- Mentored 2 junior DevOps engineers on Kubernetes, Terraform, and AWS best practices, resulting in promotions and successful delivery of 8+ infrastructure projects.
- Established automation standards and best practices guild, creating reusable patterns adopted by 3 product teams and reducing deployment-related incidents by 35%.
- Conducted knowledge-sharing sessions on EKS optimization, GitOps workflows, and cloud security, upskilling engineers in modern infrastructure practices.

EDUCATION

Bachelor of Engineering (B.E.) - Computer Science & Engineering — 06/2016 - 10/2020
Jyothy Institute of Technology — Bengaluru, India

CERTIFICATIONS

AWS Certified Solutions Architect - Associate
Microsoft Certified: DevOps Engineer Expert
Google Cloud Associate Cloud Engineer (ACE)

AWARDS & SCHOLARSHIPS

On the Spot Team Award for successfully delivering Mule Upgrade implementation within project timelines

TCS Elevate Wings 1 Program and became part of the Digital Cadre initiative

Recognized and awarded for mentoring and guiding a junior engineer in DevOps and cloud engineering initiatives

Recognized and appreciated for demonstrating EKS Auto Mode capabilities and Kubernetes automation workflows to the engineering team

SKILLS

CORE COMPETENCIES: AWS Cloud Infrastructure & Optimization, Multi-Cloud Deployment Strategies, CI/CD Automation & GitOps, DevSecOps & Container Security, Infrastructure as Code (Terraform/Terragrunt), Kubernetes Administration & EKS, Microservices & Containerization, Observability & Monitoring

TECHNICAL SKILLS: Ansible, ArgoCD, AWS, Azure DevOps, Bitbucket, Bitbucket Pipelines, CloudFormation, CloudWatch, Datadog, Docker, DVC, ECR, ECS, ESO, Evidently AI, Git, GitHub, GCP, HashiCorp Vault, Helm, HPA, IRSA, Jenkins, JFrog, Karpenter, KEDA, KServe, Kubernetes (EKS), MLflow, Nexus, Polaris, Python, SBOM, Shell Scripting, Splunk, Terraform, Terragrunt, Trivy, Wiz.
